

Project Write-Up: Chesapeake Beach Rail Museum – Exhibit Design, Fabrication & Installation

Client: Chesapeake Beach Rail Museum

Project: Exhibit Design, Fabrication, and Installation

Location: Chesapeake Beach, Maryland

Overview

The Chesapeake Beach Rail Museum preserves the history of the Chesapeake Beach Railway and its role in connecting communities and shaping local culture. The museum partnered with our team to refresh their visitor experience with new exhibit elements that combine strong visual storytelling with durable, interactive features designed for all ages.

Scope of Work

- **Exhibit Design:** Collaborated with museum staff to translate historical content into engaging, visitor-friendly formats. Designed layouts that highlight key stories and artifacts while keeping accessibility in mind.
- **Fabrication:** Produced large-format exhibit panels and custom interactive elements, including a **flip-book style display** that invites visitors to turn pages and explore historical imagery and narratives. All materials were chosen for museum-grade durability and color accuracy.
- **Installation:** Coordinated on-site installation to integrate the new exhibit pieces seamlessly into the existing gallery space. Paid careful attention to alignment, lighting conditions, and visitor flow.
- **Quality Assurance:** Reviewed all elements for accuracy, ADA accessibility, and long-term durability, ensuring the final product met both the museum's educational goals and the practical demands of a high-traffic environment.

Impact

The redesigned exhibit elements provide visitors with a richer and more interactive understanding of the region's railroad history. The flip-book installation, in particular, gives families and children a hands-on way to connect with the stories, making history accessible and memorable. This project showcases our team's ability to bring historical content to life through thoughtful design, precise fabrication, and professional installation.
